ABOUT THE DATA

The data reveals a four-season cycle: spring, summer, fall, and winter. Energy consumption reaches its highest levels in winter and summer.

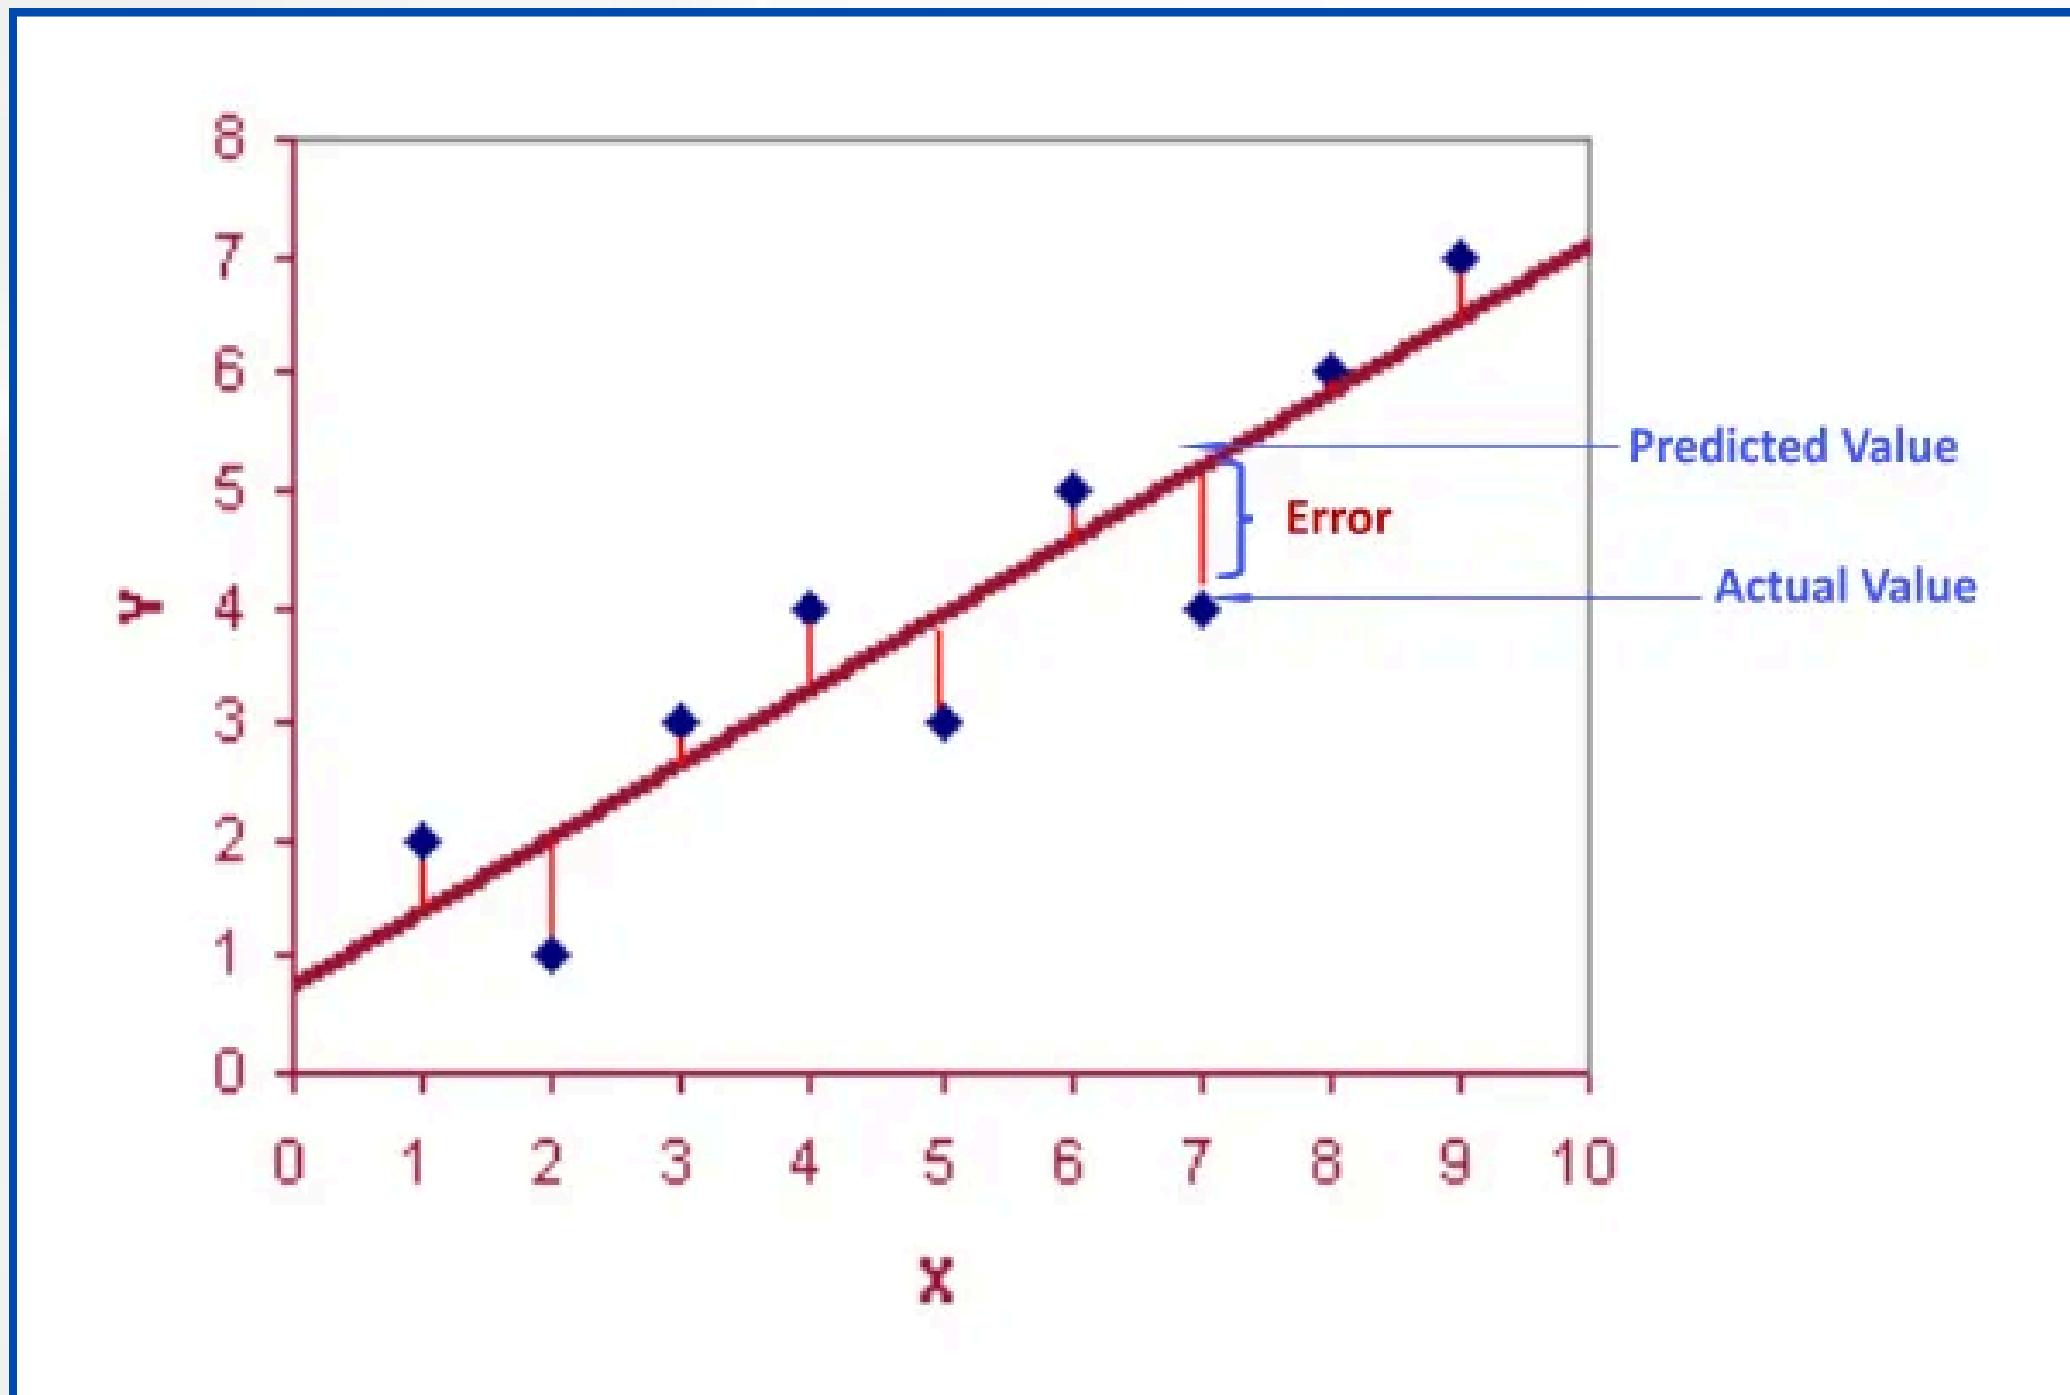

ABOUT THE DATA

The data also shows a daily pattern, as energy consumption peaks during work hours from 9 AM to 5 PM.

6-MONTH FORECASTING

6-MONTH FORECASTING

As anticipated, our 6-month forecast indicates that energy consumption is likely to peak during the summer (around August) and winter (around December). Notably, energy consumption is expected to remain high, potentially increasing even further after December.
